

## Vortex 420

### Product Aim

The Vortex 420 system is specifically intended to provide focused control of acute odour release within localised environments. Its purpose is to neutralise odour as it is being generated or at source. Regulatory compliance is then ensured and the likelihood of complaints is limited.

### How it Works

The Vortex 420 can be wall mounted or sited on an optional floor stand, allowing it to be positioned adjacent to the offending area. Air Spectrum's *Odr* additive is pumped through the fan and produces a fine mist of micron fine particles that can be propelled up to 30 feet. With a 300-degree rotation feature and a variable flow control, the system provides maximum coverage and flexibility. Its exclusive nozzle-free design eliminates both plugging problems and the need for filtering systems, thereby reducing running and maintenance costs.

The system works most efficiently with the *Odr* additive range, non-toxic odour neutralisers supplied by Air Spectrum that is effective in any environment. The Vortex 420's ability to generate such a small droplet diameter is critical to achieving optimum *Odr* delivery. The Vortex 420 can be supplied with an optional dosing pump which means that the potential for wastage through over-application is prevented. Please see the *Odr* product datasheet for more information.

The design and specification may alter dependent on the individual needs of the project and the unit may subsequently differ in appearance to the one shown.
