

Vortex 440

Product aim

The portable Vortex 440 system is specifically designed to treat localised odour issues. The advantage of this system is that it effectively neutralises odour when and wherever it occurs. Limiting the release of odour to neighbouring communities and employees prevents complaints and investigation whilst ensuring compliance with air pollution regulations.

How it works

The robust wheel-mounted Vortex 440 odour control fan can be quickly and easily moved to wherever odour is an issue. Its availability on-site for emergency use ensures the operator is always prepared for any unexpected problem. The system is compact, sturdy and powerful.

The Vortex 440 pumps water and a neutralising agent to its fan. This solution is propelled up to 30ft to form an atomised mist that effectively and rapidly reduces the odour. The system works most efficiently with the *Odr* range of additives, non-toxic odour neutralisers supplied by Air Spectrum. It is produced using bio-degradable essential oils to effectively neutralise odour particles. Please see the *Odr* additive product datasheet for more information.

The design and specification may alter dependent on the individual needs of the project and the unit may subsequently differ in appearance to the one shown.
